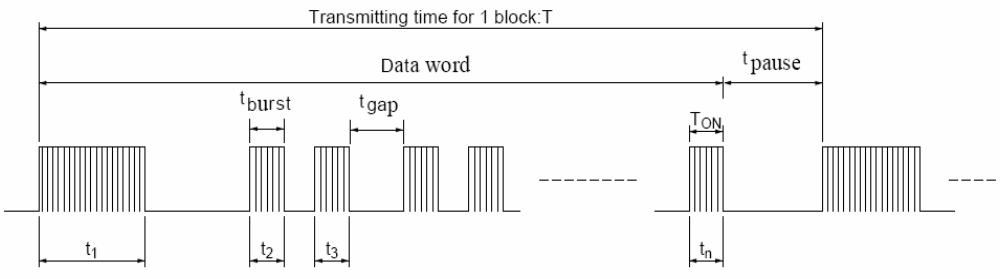
6) above (1)~(5) should be all meet and all remote control button should be operated properly.



10-2. If your condition doesn't meet the above statement, it has a chanec to operate unsuitably.

10-3. It should be minimum 30 cm off between RC-M and Transmitter for normal operating.
if the RC-M and Transmitter are near too much, it has a chance to no response.

11. Caution(When use and storage of this device)

11-1. Store and use where there is no force causing transformation or change in quality

11-2. Store and use when there is no extreme humidity

11-3. Do not wash this device. Wipe the stains of diode side with a soft cloth.
You can use the solvent, ethylalcohol or methylalcohol or isopropylalcohol only.

11-4. The shield case shall be grounded on the PCB pattern. There are two cases, one is that shield case and GND pin are connected in the shiled case, the other is not connected in it.
If the receiver modules of shield case is not becoming ground connection, there is a possibility of being weak in the EMI(Electronic Microwave Interperence) condition.

11-5. Solder pad within the condition of ratings. after soldering do not add extrorse force.

11-6. Put decoupling device between Vcc and GND for reduce the noise from power supply line.
recommand Vcc-GND 47㎌ and Vcc- 100Ω. Decoupling device should be near receiver modules.

11-7. The decrease in distance, the output noise, the malfunction, etc. might occur because of a surrounding electromagnetic environment.

11-8. To prevent static electricity damage to the Pre-AMP make sure that the human body, the soldering iron is connected to ground before using

11-9. This device has to control of static electricity
