

MH481, a linear Hall-effect sensor, is composed of Hall sensor, linear amplifier and Totem-Pole output stage. It features low noise output, which makes it unnecessary to use external filtering. It also can provide increased temperature stability and accuracy. The linear Hall sensor has a wide operating temperature range of  $-40^{\circ}\text{C}$  to  $+105^{\circ}\text{C}$ , appropriate for commercial, consumer, and industrial environments.

The high sensitivity of Hall-effect sensor accurately tracks extremely weak changes in magnetic flux density. The linear sourcing output voltage is set by the supply voltage and in proportion of vary of the magnetic flux density. Typical operation current is 2.5 mA and operating voltage range is 3.0 volts to 6.5 volts.

The UA package style available provides magnetically optimized solutions for most applications. The SQ package is a three-lead ultra-mini SMD and SG is the industrial standard package in SMT process.

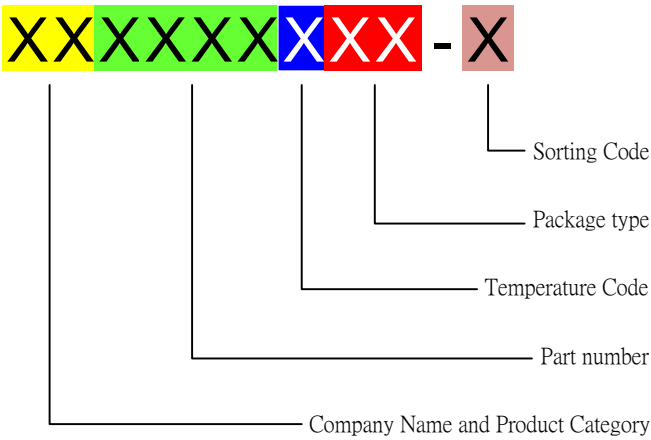

### ***Features and Benefits***

- Operating Voltage Range: 3.0V~6.5V
- Power consumption of 2.5 mA at 5 V<sub>DC</sub> for energy efficiency
- Low-Noise Operation
- Linear output for circuit design flexibility
- Totem-Pole for a stable and accurate output
- Responds to either positive or negative gauss
- Small package for SMD
- Magnetically Optimized Package for SIP
- Cost competitive
- Robust ESD performance

### ***Applications***

- Current sensing
- Motor control
- Position sensing
- Magnetic code reading
- Rotary encoder
- Ferrous metal detector
- Vibration sensing
- Liquid level sensing
- Weight sensing
