■ 使用注意事项 Precautions for Use

- 片状电阻器的基材是氧化铝。由于和安装基板的热膨胀系数不同，在反复提供热循环等热应力时，结合部的焊锡（焊缝部）有时会发生裂纹。特别是大型尺寸2H/3A，由于热膨胀大，而且自动发热也大，环境温度的变动有大的反复和载荷启闭有反复时，需要注意裂纹的发生。用环氧树脂印刷电路板（FR-4）作一般性热循环试验，在使用温度范围的上下限进行试验时，1J~2B的类型，不容易发生裂纹，而2H/3A型，则有易于发生裂纹的倾向。由于热应力而发生裂纹，取决于安装的焊接区的大小、焊接量、安装基板的散热性等。因此，在环境温度有大的变化和载荷 ON / OFF 使用条件时，应充分注意后进行设计。
- 在50mΩ以下的电阻值中，根据焊接区模式的大小和续接焊接的量，焊接后的电阻值会有变动。应事前在确认电阻值降低·上升的影响后，进行设备设计。
- The substrate of chip resistors is alumina. Cracks may occur at the connection of solder (solder fillet portion) due to the difference of the coefficient of thermal expansion from a mounting board when heat stress like heat cycle, etc. are repeatedly given to them. Care should be taken to the occurrence of the cracks when the change in ambient temperature or ON/OFF of load is repeated, especially when large types of 2H/3A which have large thermal expansion and also self heating. By general temperature cycle test using glass-epoxy (FR-4) boards under the maximum/minimum temperatures of operating temperature range, the crack does not occur easily in the types of 1J~2B, but the crack tends to occur in the types of 2H/3A. The occurrence of the crack by heat stress may be influenced by the size of a pad, solder volume, heat radiation of mounting board etc., so please pay careful attention to designing when a big change in ambient temperature and conditions for use like ON/OFF of load can be assumed.
- In the resistance values of 50mΩ or under, the resistance value after soldering may change depending on the size of pad pattern or solder amount. Make sure the effect of decline/increase of resistance value before designing.
