SP4T High Isolation Terminated Switch 0.01 - 4.0 GHz

Rev. V1

Features

- High Isolation: 60 dB @ 2.1 GHz
- Insertion Loss: 0.8 dB @ 2.1 GHz
- Input IP3: 50 dBm Typical @ 2.1 GHz
- Integral CMOS Decoder
- Low Gate Lag for timing sensitive applications
- 5 States: 4 ON paths and All-Off State
- 50 Ω Terminated Outputs (Off-State)
- Lead-Free 4 mm 24-Lead PQFN package
- RoHS* Compliant and 260°C Reflow Compatible
- Optional 2 Control Operation (no All-Off State)

Description

The MASW-010350 is an industry leading high isolation single pole four throw (SP4T) switch. This device design is optimized to take advantage of separate GaAs pHEMT switch die and CMOS driver die. The switch circuit design is symmetric and combined with the separate CMOS decoder allows it to maintain an excellent combination of insertion loss and isolation for all states. This makes the device ideal for band switching in multi-channel and multi-mode base-station applications as well as other applications where a compact, high isolation, SP4T switch is required.

The MASW-010350 switch die is fabricated using a mature 0.5 micron gate length GaAs pHEMT process and features full passivation for enhanced performance and reliability.

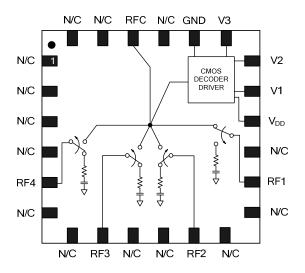

The MASW-010350 is offered in an industry standard lead-free 4mm 24-Lead PQFN RoHS compliant plastic package, which is ideal for high volume surface mount reflow assembly.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices. An external protection circuit using ESD/ Transient protection devices on the RF ports can be used to protect the IC if required in application.

Please reference application note AN3007 on http://www.macomtech.com for further detail.
