

P125 High pressure sensor

- Ranges from 2000 to 7000 bar
- Stainless steel
- Robust for Fatigue testing
- High level output in option
- For static and dynamic applications
- Linearity up to $\pm 0.3\%$ F.S.

DESCRIPTION

The **P125** is a high pressure transducer designed for to measure static and dynamic pressure up to 7 000 bar (600 kpsi). The mechanical design and a stainless steel construction allow the sensor to withstand most aggressive liquids and fatigue testing.

The sensing element is fitted with a temperature compensated Wheatstone bridge equipped with thin strain gauges. MEAS offers amplified analogue versions to obtain 0.5-4.5V, 0-5V and 4-20mA.

For miniature with flush diaphragm designs, the model **XPM6** can measure up to 1 000 bar (15 kpsi)

With many years of experience as a designer and manufacturer of sensors, Measurement Specialties, Inc. has the expertise to customize and/or design sensors for specific uses and testing environments. To meet your needs we also offer complete turnkey systems. Our conditioning electronics can power the sensor, amplify the electronic signal, and display the data digitally. A turnkey measurement system arrives with matched components, formatted, calibrated and ready for your immediate use.
