SIGNAL LAMPS

SIGNAL LAMPS
GENERAL INFORMATION

Signal Lamps with integral lamps/LED
The soldered lamps/LED without base cannot be replaced.

Signal Lamps with lamp socket
An integral lamp socket allows replacement of lamps/LED of the appropriate type.

Filament operating life
Operating life specifications refer to AC voltage operation. If operated with DC voltage, these values are reduced by 40%.

Color and lenses
transparent = clear, grooved on inner surface for better light diffusion
opaque **= translucent** but not clear

Standard mounting dimensions
We recommend use of mounting hole diameters 16, 22 and 30 mm, as these comply with international standard recommendations and DIN standards.

Limit values
The voltage specified as the limit value is the standard insulating voltage for the signal lamps. The permitted ambient temperatures are always specified in conjunction with the maximum power of the lamps used, and the signal lamp should be located outside of the space subject to increased temperature.

Neon lamps
Neon lamps may glow on a short time after having been switched off, for example in combination with long wires.

To avoid this, a parallel resistor with 1,2 MΩ 1/4 W, can be used.
