Triple 2-channel analog multiplexer/demultiplexer

74LV4053

FEATURES

- Optimized for low voltage applications: 1.0 to 6.0 V
- Accepts TTL input levels between V_{CC} = 2.7 V and V_{CC} = 3.6 V
- Low typ "ON" resistance:

100 Ω at V_{CC} – V_{EE} = 4.5 V 150 Ω at V_{CC} – V_{EE} = 3.0 V 240 Ω at V_{CC} – V_{EE} = 2.0 V

- Logic level translation: to enable 3 V logic to communicate with ± 3 V analog signals
- Typical "break before make" built in
- Output capability: non-standard
- I_{CC} category: MSI

DESCRIPTION

The 74LV4053 is a low-voltage CMOS device and is pin and function compatible with the 74HC/HCT4053.

The 74LV4053 is a triple 2-channel analog multiplexer/demultiplexer with a common enable input (E). Each multiplexer/demultiplexer has two independent inputs/outputs (nY $_0$ to nY $_1$), a common input/output (nZ) and three digital select inputs (S $_1$ to S $_3$).

With E LOW, one of the two switches is selected (low impedance ON-state) by S_1 to S_3 With \overline{E} HIGH, all switches are in the high impedance OFF-states, independent of S₁ and S₃.

V_{CC} and GND are the supply voltage pins for the digital control inputs $(S_1, \text{ to } S_3, \text{ and } \overline{E})$. The V_{CC} to GND ranges are 1.0 to 6.0 V. The analog inputs/outputs (nY₀, to nY₁, and nZ) can swing between V_{CC} as a positive limit and V_{EE} as a negative limit. V_{CC} - V_{EE} may not exceed 6.0 V. For operation as a digital multiplexer/demultiplexer, VEE is connected to GND (typically ground).

QUICK REFERENCE DATA

GND = 0 V; $T_{amh} = 25^{\circ}C$; $t_r = t_f \le 2.5 \text{ ns}$

C _S	Maximum switch capacitance independent (Y) common (Z)		5 8	Γ.

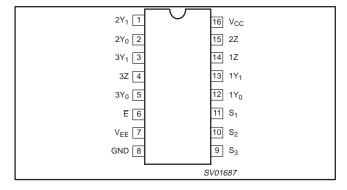

NOTES:

- C_{PD} is used to determine the dynamic power dissipation (P_D in μW)
 - $P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum_i ((C_{L+} C_S) \times V_{CC}^2 \times f_o)$ where:
 - f_i = input frequency in MHz; C_L = output load capacity in pF;
 - f_0 = output frequency in MHz; C_S = maximum switch capacitance in pF;
- V_{CC} = supply voltage in V; $\sum ((C_L + C_S) \times V_{CC}^2 \times f_0)$ = sum of the outputs.
- The condition is $V_I = GND$ to V_{CC} .

NOTE

Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the
device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to
absolute-maximum-rated conditions for extended periods may affect device reliability.

The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

^{1.} The LV is guaranteed to function down to $V_{CC} = 1.0 \text{V}$ (input levels GND or V_{CC}); DC characteristics are guaranteed from $V_{CC} = 1.2 \text{V}$ to $V_{CC} = 6.0 \text{V}$.

NOTES:

- 1. All typical values are measured at $T_{amb} = 25$ °C.
- 2. At supply voltages approaching 1.2 V, the analog switch ON-resistance becomes extremely non-linear. Therefore, it is recommended that these devices be used to transmit digital signals only, when using these supply voltages.

	DEFINITIONS								
Data Sheet Identification	Product Status	Definition							
Objective Specification	Formative or in Design	This data sheet contains the design target or goal specifications for product development. Specifications may change in any manner without notice.							
Preliminary Specification	Preproduction Product	This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.							
Product Specification	Full Production	This data sheet contains Final Specifications. Philips Semiconductors reserves the right to make changes at any time without notice, in order to improve design and supply the best possible product.							

Philips Semiconductors and Philips Electronics North America Corporation reserve the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

LIFE SUPPORT APPLICATIONS

Philips Semiconductors and Philips Electronics North America Corporation Products are not designed for use in life support appliances, devices, or systems where malfunction of a Philips Semiconductors and Philips Electronics North America Corporation Product can reasonably be expected to result in a personal injury. Philips Semiconductors and Philips Electronics North America Corporation customers using or selling Philips Semiconductors and Philips Electronics North America Corporation Products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors and Philips Electronics North America Corporation for any damages resulting from such improper use or sale.
