DRV883x 低压 H 桥驱动器

1 特性

- H 桥电机驱动器
  - 驱动一个直流电机或其他负载
  - 低金属氧化物半导体场效应晶体管 (MOSFET) 导通电阻：高侧 + 低侧 (HS + LS) 280mΩ
- 1.8A 最大驱动电流
- 独立的电机和逻辑电源引脚：
  - 电机 VM：0 至 11V
  - 逻辑 VCC：1.8 至 7V
- 脉宽调制 (PWM) 或 PH/EN 接口
  - DRV8837：脉宽调制 (PWM)，IN1/IN2
  - DRV8838：PH/EN
- 具有 120nA 最大睡眠电流的低功耗睡眠模式
  - nSLEEP 引脚
- 小型封装尺寸
  - 8 超薄小外形尺寸封装 (WSON) (PowerPAD™)
  - 2.0mm × 2.0mm
- 保护特性
  - VCC 欠压闭锁 (UVLO)
  - 过流保护 (OCP)
  - 热关断 (TSD)

2 应用范围

- 摄像机
- 数字单镜头反光 (DSLR) 镜头
- 消费类产品
- 玩具
- 机器人技术
- 医疗设备

3 说明

DRV883x 为摄像机、消费类产品、玩具和其它低电压或者电池供电的运动控制类应用提供了一个集成的电机驱动器解决方案。 此器件能够驱动一个直流电机或其他诸如螺线管的器件。 输出驱动器块由一个配置为 H 桥的 N 通道功率 MOSFET 组成，以驱动电机绕组。 一个内部电荷泵生成所需的栅极驱动电压。

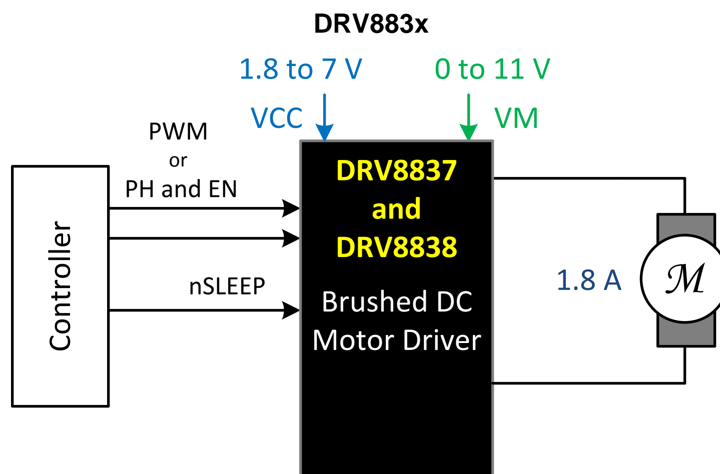
DRV883x 能够提供高达 1.8A 的输出电流。 它运行在 0 至 11V 之间的电机电源电压，以及 1.8V 至 7.0V 范围内的器件电源电压上。

DRV8837 具有一个 PWM (IN/IN) 输入接口；DRV8837 具有一个 PH/EN 输入接口（此处应为 DRV8838 具有一个 PH/EN 输入接口）。 这两个接口都与行业标准器件兼容。

还提供用于过流保护、短路保护、欠压闭锁和过热保护的内部关断功能。

器件信息

订货编号	封装	封装尺寸
DRV8837DSGR	WSON (8)	2.0mm x 2.0mm
DRV8838DSGR	WSON (8)	2.0mm x 2.0mm



PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

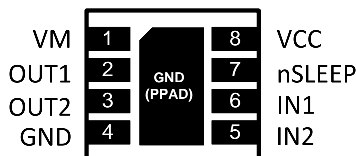
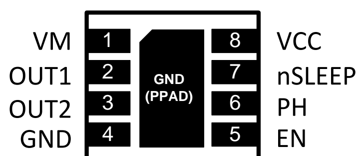
5 Terminal Configuration and Functions

DRV8837 DSG – WSON (Top View)



DRV8838 DSG – WSON (Top View)



Terminal Descriptions

TERMINAL		TYPE	DESCRIPTION
NAME	NUMBER		
POWER AND GROUND			
GND	4	PWR	Device ground Must be connected to ground
VCC	8	PWR	Logic Power supply Bypass to GND with a 0.1-µF ceramic capacitor rated for VCC
VM	1	PWR	Motor power supply Bypass to GND with a 0.1-µF ceramic capacitor rated for VM
CONTROL			
IN1/PH	6	I	IN1 or PHASE input See Detailed Description for more information
IN2/EN	5	I	IN2 or ENABLE input
nSLEEP	7	I	Sleep mode input Logic low puts the device in low-power sleep mode; logic high for normal operation; internal pulldown resistor
OUTPUT			
OUT1	2	O	Motor output Connect to motor winding
OUT2	3	O	

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[1][2]

	MIN	MAX	UNIT
Motor power supply voltage range (VM)	–0.3	12	V
Logic power supply voltage range (VCC)	–0.3	7	V
Control pin voltage range (IN1, IN2, PH, EN, nSLEEP)	–0.5	7	V
Peak drive current (OUT1, OUT2)	Internally limited		A
T_J, operating virtual junction temperature range	–40	150	ºC

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to network ground terminal.

6.2 Handling Ratings

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
T_{stg}	Storage temperature range	–60	150	ºC

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)[1]

		MIN	MAX	UNIT
VM	Motor power supply voltage range	0	11	V
VCC	Logic power supply voltage range	1.8	7	V
I_{OUT}	Motor peak current	0	1.8	A
f_{PWM}	Externally applied PWM frequency	0	250	kHz
V_{LOGIC}	Logic level input voltage	0	5.5	V
T_A	Operating ambient temperature	–40	85	°C

(1) Power dissipation and thermal limits must be observed.

6.4 Thermal Information

over operating free-air temperature range (unless otherwise noted)

THERMAL METRIC[1]		DRV8837, DRV8838	UNIT
		WSON (8 TERMINALS)	
Θ_{JA}	Junction-to-ambient thermal resistance[2]	60.9	°C/W
$\Theta_{JC(TOP)}$	Junction-to-case (top) thermal resistance[3]	71.4	
Θ_{JB}	Junction-to-board thermal resistance[4]	32.2	
Ψ_{JT}	Junction-to-top characterization parameter[5]	1.6	
Ψ_{JB}	Junction-to-board characterization parameter[6]	32.8	
$\Theta_{JC(BOTTOM)}$	Junction-to-case (bottom) thermal resistance[7]	9.8	

(1) For more information about traditional and new thermal limits, see the IC Package Thermal Metrics Report, SPRA953.
(2) The junction-to-ambient thermal resistance under natural convection is obtained in a simulation on a JEDEC-standard, high-K board, as specified in JESD51-7, in an environment described in JESD51-2a.
(3) The junction-to-case (top) thermal resistance is obtained by simulating a cold plate test on the package top. No specific JEDEC-standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.
(4) The junction-to-board thermal resistance is obtained by simulating in an environment with a ring cold plate fixture to control the PCB temperature, as described in JESD51-8.
(5) The junction-to-top characterization parameter, ψ_{JT}, estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining θ_{JA}, using a procedure described in JESD51-2a (sections 6 and 7).
(6) The junction-to-board characterization parameter, ψ_{JB}, estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining θ_{JA} , using a procedure described in JESD51-2a (sections 6 and 7).
(7) The junction-to-case (bottom) thermal resistance is obtained by simulating a cold plate test on the exposed (power) pad. No specific JEDEC standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.

7 Detailed Description

7.1 Overview

The DRV883x is a H-bridge driver that can drive one DC motor or other devices like solenoids. The outputs are controlled using either a PWM interface (IN1/IN2) on the DRV8837 or a PH/EN interface on the DRV8838.

A low-power sleep mode is included, which can be enabled using the nSLEEP pin.

These devices greatly reduce the component count of motor driver systems by integrating the necessary driver FETs and FET control circuitry into a single device. In addition, the DRV883x adds protection features above traditional discrete implementations: undervoltage lockout, overcurrent protection, and thermal shutdown.

7.2 Functional Block Diagram

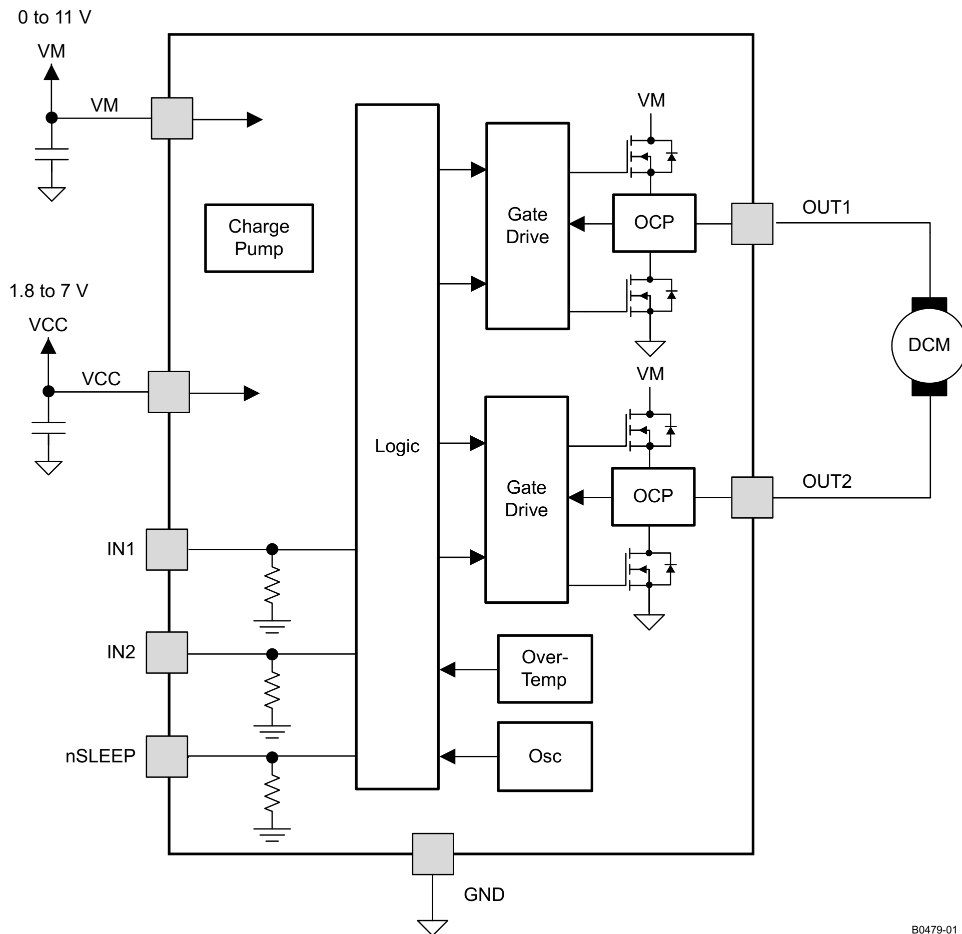

Figure 4. DRV8837 Functional Block Diagram

Functional Block Diagram (continued)

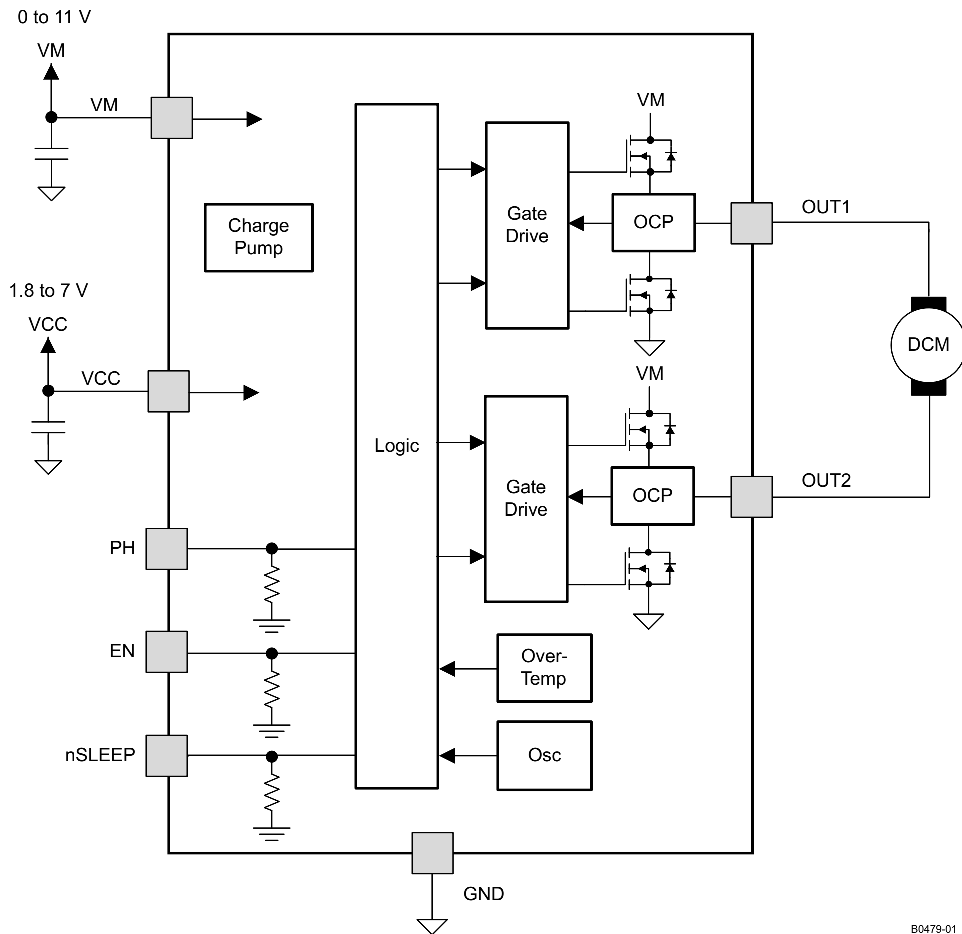

Figure 5. DRV8838 Functional Block Diagram

Copyright © 2012–2014, Texas Instruments Incorporated

7.3 Feature Description

7.3.1 Bridge Control

The DRV8837 is controlled using a PWM input interface, also called an IN/IN interface. Each output is controlled by a corresponding input pin.

Table 1 shows the logic for the DRV8837 device:

Table 1. DRV8837 Device Logic

nSLEEP	IN1	IN2	OUT1	OUT2	Function (DC Motor)
0	X	X	Z	Z	Coast
1	0	0	Z	Z	Coast
1	0	1	L	H	Reverse
1	1	0	H	L	Forward
1	1	1	L	L	Brake

The DRV8838 is controlled using a PHASE/ENABLE interface. This interface uses one pin to control the H-bridge current direction, and one pin to enable or disable the H-bridge.

Table 2 shows the logic for the DRV8838:

Table 2. DRV8838 Device Logic

nSLEEP	PH	EN	OUT1	OUT2	Function (DC Motor)
0	X	X	Z	Z	Coast
1	X	0	L	L	Brake
1	1	1	L	H	Reverse
1	0	1	H	L	Forward

7.3.2 Sleep Mode

If the nSLEEP pin is brought to a logic-low state, the DRV883x enters a low-power sleep mode. In this state, all unnecessary internal circuitry is powered down.

7.3.3 Power Supplies and Input Terminals

The input pins may be driven within their recommended operating conditions with or without the VCC and/or VM power supplies present. No leakage current path will exist to the supply. There is a weak pulldown resistor (approximately 100 kΩ) to ground on each input pin.

VCC and VM may be applied and removed in any order. When VCC is removed, the device will enter a low power state and draw very little current from VM. VCC and VM may be connected together if the supply voltage is between 1.8 and 7 V.

The VM voltage supply does not have any undervoltage lockout protection (UVLO), so as long as VCC > 1.8 V; the internal device logic will remain active. This means that the VM pin voltage may drop to 0 V, however, the load may not be sufficiently driven at low VM voltages.

7.3.4 Protection Circuits

The DRV883x is fully protected against VCC undervoltage, overcurrent, and overtemperature events.

VCC Undervoltage Lockout: If at any time the voltage on the VCC pin falls below the undervoltage lockout threshold voltage, all FETs in the H-bridge will be disabled. Operation resumes when VCC rises above the UVLO threshold.

Overcurrent Protection (OCP): An analog current limit circuit on each FET limits the current through the FET by removing the gate drive. If this analog current limit persists for longer than tDEG, all FETs in the H-bridge will be disabled. Operation resumes automatically after t_{RETRY} has elapsed. Overcurrent conditions will be detected on both the high-side and low-side devices. A short to VM, GND, or from OUT1 to OUT2 results in an overcurrent condition

Thermal Shutdown (TSD): If the die temperature exceeds safe limits, all FETs in the H-bridge will be disabled. After the die temperature falls to a safe level, operation automatically resumes.

Table 3. Fault Behavior

Fault	Condition	H-bridge	Recovery
VCC undervoltage (UVLO)	VCC < 1.7 V	Disabled	VCC > 1.8 V
Overcurrent (OCP)	I_{OUT} > 1.9 A (MIN)	Disabled	t_{RETRY} elapses
Thermal Shutdown (TSD)	T_J > 150°C (MIN)	Disabled	T_J < 150°C

7.4 Device Functional Modes

The DRV883x is active unless the nSLEEP pin is brought logic low. In sleep mode the H-bridge FETs are disabled Hi-Z. The DRV883x is brought out of sleep mode automatically if nSLEEP is brought logic high.

The H-bridge outputs are disabled during undervoltage lockout, overcurrent, and overtemperature fault conditions.

Table 4. Operation Modes

Mode	Condition	H-bridge
Operating	nSLEEP pin = 1	Operating
Sleep mode	nSLEEP pin = 0	Disabled
Fault encountered	Any fault condition met	Disabled

Copyright © 2012–2014, Texas Instruments Incorporated

8 Applications and Implementation

8.1 Application Information

The DRV883x is device is used to drive one DC motor or other devices like solenoids. The following design procedure can be used to configure the DRV883x.

8.2 Typical Applications

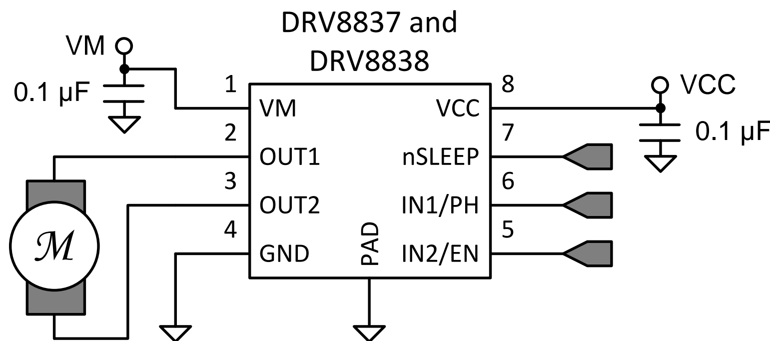

Figure 6. Schematic of DRV883x Application

8.2.1 Design Requirements

Table 5 shows required parameters for a typical usage case.

Table 5. System Design Requirements

Design Parameter	Reference	Example Value
Motor supply voltage	VM	9 V
Logic supply voltage	VCC	3.3 V
Target RMS current	I_{OUT}	0.8 A

8.2.2 Detailed Design Procedure

8.2.2.1 Power Dissipation

Power dissipation in the DRV883x is dominated by the power dissipated in the output FET resistance, or $R_{DS(ON)}$. Average power dissipation when running a stepper motor can be roughly estimated by:

$$P_{TOT} = R_{DS(ON)} \times (I_{OUT(RMS)})^2$$

where

- P_{TOT} is the total power dissipation
- $R_{DS(ON)}$ is the resistance of the HS plus LS FETs
- $I_{OUT(RMS)}$ is the RMS or DC output current being supplied to the load (1)

The maximum amount of power that can be dissipated in the device is dependent on ambient temperature and heatsinking.

Note that $R_{DS(ON)}$ increases with temperature, so as the device heats, the power dissipation increases.

The DRV883x has thermal shutdown protection. If the die temperature exceeds approximately 150°C, the device will be disabled until the temperature drops to a safe level.

Any tendency of the device to enter thermal shutdown is an indication of either excessive power dissipation, insufficient heatsinking, or too high an ambient temperature.

8.2.3 Application Performance Plots

9 Power Supply Recommendations

VCC and VM may be applied and removed in any order. When VCC is removed, the device enters a low power state and draws very little current from VM. VCC and VM may be connected together if the supply voltage is between 1.8 and 7 V.

Bypass VM and VCC with 0.1-μF ceramic capacitors rated for VM and VCC. Place these capacitors as close to the device as possible.

The VM voltage supply does not have any undervoltage lockout protection, so as long as VCC > 1.8 V; the internal device logic will remain active. This means that the VM pin voltage may drop to 0 V; however, the load may not be sufficiently driven at low VM voltages.

Copyright © 2012–2014, Texas Instruments Incorporated

10 Layout

10.1 Layout Guidelines

The VM and VCC terminals should be bypassed to GND using low-ESR ceramic bypass capacitors with a recommended value of 0.1 µF rated for VM and VCC. These capacitors should be placed as close to the VM and VCC pins as possible with a thick trace or ground plane connection to the device GND pin.

11.2 Trademarks

PowerPAD is a trademark of Texas Instruments.

11.3 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

11.4 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms and definitions.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. Quad Flatpack, No–Leads (QFN) package configuration.
D. The package thermal pad must be soldered to the board for thermal and mechanical performance. See the Product Data Sheet for details regarding the exposed thermal pad dimensions.
E. Falls within JEDEC MO–229.

DSG (S–PWSON–N8) PLASTIC SMALL OUTLINE NO–LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

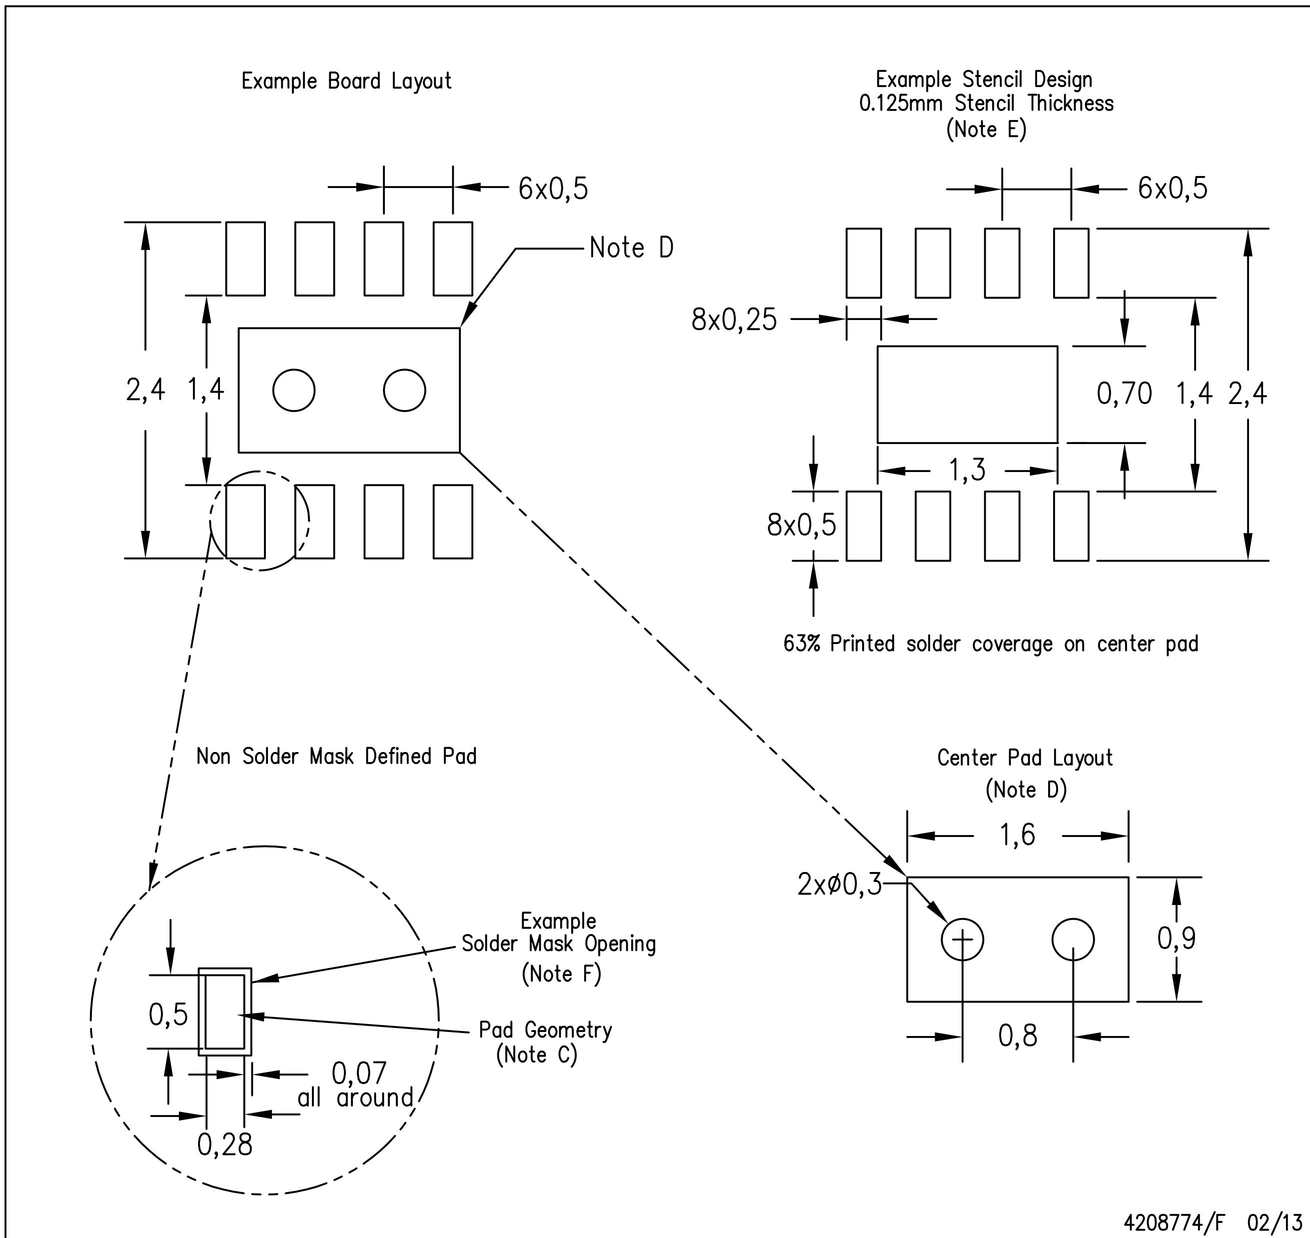
NOTE: All linear dimensions are in millimeters

DSG (S-PWSON-N8) PLASTIC SMALL OUTLINE NO-LEAD



NOTES:
- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <http: //www.ti.com>.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
- F. Customers should contact their board fabrication site for solder mask tolerances.

重要声明

德州仪器(TI) 及其下属子公司有权根据 JESD46 最新标准, 对所提供的产品和服务进行更正、修改、增强、改进或其它更改， 并有权根据 JESD48 最新标准中止提供任何产品和服务。客户在下订单前应获取最新的相关信息, 并验证这些信息是否完整且是最新的。所有产品的销售都遵循在订单确认时所提供的TI 销售条款与条件。

TI 保证其所销售的组件的性能符合产品销售时 TI 半导体产品销售条件与条款的适用规范。仅在 TI 保证的范围内，且 TI 认为 有必要时才会使用测试或其它质量控制技术。除非适用法律做出了硬性规定，否则没有必要对每种组件的所有参数进行测试。

TI 对应用帮助或客户产品设计不承担任何义务。客户应对其使用 TI 组件的产品和应用自行负责。为尽量减小与客户产品和应 用相关的风险，客户应提供充分的设计与操作安全措施。

TI 不对任何 TI 专利权、版权、屏蔽作品权或其它与使用了 TI 组件或服务的组合设备、机器或流程相关的 TI 知识产权中授予 的直接或隐含权限作出任何保证或解释。TI 所发布的与第三方产品或服务有关的信息，不能构成从 TI 获得使用这些产品或服 务的许可、授权、或认可。使用此类信息可能需要获得第三方的专利权或其它知识产权方面的许可，或是 TI 的专利权或其它 知识产权方面的许可。

对于 TI 的产品手册或数据表中 TI 信息的重要部分，仅在没有对内容进行任何篡改且带有相关授权、条件、限制和声明的情况 下才允许进行复制。TI 对此类篡改过的文件不承担任何责任或义务。复制第三方的信息可能需要服从额外的限制条件。

在转售 TI 组件或服务时，如果对该组件或服务参数的陈述与 TI 标明的参数相比存在差异或虚假成分，则会失去相关 TI 组件 或服务的所有明示或暗示授权，且这是不正当的、欺诈性商业行为。TI 对任何此类虚假陈述均不承担任何责任或义务。

客户认可并同意，尽管任何应用相关信息或支持仍可能由 TI 提供，但他们将独力负责满足与其产品及在其应用中使用 TI 产品 相关的所有法律、法规和安全相关要求。客户声明并同意，他们具备制定与实施安全措施所需的全部专业技术和知识，可预见 故障的危险后果、监测故障及其后果、降低有可能造成人身伤害的故障的发生机率并采取适当的补救措施。客户将全额赔偿因 在此类安全关键应用中使用任何 TI 组件而对 TI 及其代理造成的任何损失。

在某些场合中，为了推进安全相关应用有可能对 TI 组件进行特别的促销。TI 的目标是利用此类组件帮助客户设计和创立其特 有的可满足适用的功能安全性标准和要求的终端产品解决方案。尽管如此，此类组件仍然服从这些条款。

TI 组件未获得用于 FDA Class III（或类似的生命攸关医疗设备）的授权许可，除非各方授权官员已经达成了专门管控此类使 用的特别协议。

只有那些 TI 特别注明属于军用等级或“增强型塑料”的 TI 组件才是设计或专门用于军事/航空应用或环境的。购买者认可并同 意，对并非指定面向军事或航空航天用途的 TI 组件进行军事或航空航天方面的应用，其风险由客户单独承担，并且由客户独 力负责满足与此类使用相关的所有法律和法规要求。

TI 已明确指定符合 ISO/TS16949 要求的产品，这些产品主要用于汽车。在任何情况下，因使用非指定产品而无法达到 ISO/TS16949 要求，TI不承担任何责任。
