## 

## Description:

OPB804 contains an IRLED and phototransistor paired in an opaque plastic housing .
The housing is an opaque grade of injection molded plastic, which minimizes the assembly's sensitivity to visible and near-infrared radiation. A wide open aperture [ 0.06 " ( 1.5 mm ) equivalent] makes it versatile for general applications.

The output phototransistor turns off when an object opaque to IR ( 700 nm to 1100 nm ) is inserted into the gap between the emitter and sensor, thereby interrupting the light beam.
